# FUZZY LOGIC MODEL FOR MONITORING LIVESTOCK FARMING

BY

NWALA, BLESSING UCHECHI

(B.Eng. KNUST)

G2018/MSc/COMP/FT/006

A Thesis submitted to the School of Graduate Studies in partial fulfilment of the requirements for the award of degree of Master of Science (MSc) in Computer Science Faculty of Science, University of Port Harcourt.

Name of Supervisor:

MARCH, 2022

Prof. L.N Onyejegbu

## DECLARATION

I, NWALA, BLESSING UCHECHI with Registration Number G2018/MSc/COMP/FT/006 declare that the work in this Thesis on FUZZY LOGIC MODEL FOR MONITORING LIVESTOCK FARMING was carried out by me; that it is my original work and that it has not been submitted wholly or in part for the award of a Degree in any Institution.

## DEDICATION

This research work is dedicated to the highest God who is the creator of all things.

## ACKNOWLEDGEMENTS

I acknowledge the efforts and guidance of my supervisor, Prof. (Mrs.) L.N Onyejegbu without your thorough supervision, this work would not have been completed. To the staffs of Computer Science Department, I want to say a big thank you. I want also acknowledge my HOD, Dr. F.E. Onuodu, Head of Computer Science Department, University of Port Harcourt for his support and advices during this period he is like a father to us all, and ever ready to assist in any way he can. I am also grateful to the faculty and post graduate school staff for their support, without your support we won't be where we are today.

To my wonderful parents, Engr. Nwala Livinus and Dr. (Mrs.) Patricia Nwala, I thank you for your unconditional love and support, especially during the period of this research work. Finally, let me respectively appreciate the support of my siblings and friends who also supported me during the period of this research work. Nwala Prosper, Nwala Albright, Nwala Onyinyechi, Eleeh Cynthia, Ifiok Umoh and Umejuru Daniel. Once again, thank you and God bless you all.

### CHAPTER ONE: INTRODUCTION

1.1	Background to the Study	1
1.2	Statement of the Problem	2
1.3	Aim and Objectives of the Study	3
1.4	Significance of the Study	4
1.5	Scope of the Study	4
1.6	Motivation of the Study	4
1.7	Definition of Terms	5

### CHAPTER TWO: LITERATURE REVIEW

2.1	Concept of smart agriculture	6
2.1.1	Livestock farming	8
2.2	Deep learning as a tool for improved livestock farming	10

2.3	The Internet-of-Things as a tool for smart livestock farming	14
2.3.1	Application areas of IoT	15
2.3.2	Major IoT challenges	18
2.4	Fuzzy Logic as a tool for improving smart livestock farming	19
2.4.1	Fuzzy Sets and Systems	25
2.4.2	Analysis of Fuzzy Logic Algorithm	26
2.5	Review of Related Literature	29
2.6	Direction of the Study	54
CHAPTER THREE: MATERIALS AND METHODS		
3.1	Analysis of the Existing System	55
3.1.1	Detailed Analysis of the Existing System	57
3.1.2	Dataflow Diagram of the Existing System	62
3.1.3	Decision Tree Algorithm of the Existing System	64
3.1.4	Advantages of the Existing System	65
3.1.5	Disadvantages of the Existing System	65
3.2	Design of the Proposed System	65
3.2.1	Detailed Analysis of the Proposed System	67
3.2.2	Dataflow Diagram of the Proposed System	75
3.2.3	Mathematical Model of the Proposed System	77
3.2.4	Algorithm of the Proposed System	78
3.2.5	Methodology	79
3.2.6	Frontend Interface Design	80
3.2.7	Steps for the Proposed System	81
3.2.8	Unified Modelling Language of the Proposed System	83
3.3	Datasets	84
3.4	Choice and Justification of Programming	87
3.5	Advantages of the Proposed System	87

## CHAPTER FOUR: RESULTS AND DISCUSSION

4.1	System Requirements	88
4.2	Outputs and Discussion	88
	4.2.1 Performance evaluation of the Existing and Proposed Systems	95
4.3	Discussion of Results	99

## CHAPTER FIVE: SUMMARY, CONCLUSION AND RECOMMENDATIONS

5.1	Summary	101
5.2	Conclusion	101
5.3	Recommendations	102
5.4	Contributions to Knowledge	102
5.5	Limitations to the Study	102
5.6	Future Work	102

Abstract		

Livestock farming comes with challenges such as exploitation by farmers, issues of expansion, economic volatility, input volatility, consumer retailer perception, poor animal health care and so on. The study intends to specifically focus on exploitation of livestock farming by farmers. This specific issue is associated with the concept of factory farming. Factory farming is the main cause of animal suffering and abuse. These silent victims have been converted into machines that generate meat, milk, and eggs. These animals are sentient beings with a desire to live, but are cruelly treated by the farmers that are supposed to manage them. In this work, an improved fuzzy-based model for monitoring livestock farming was developed. The study adopted Waterfall model

as methodology and implementation was achieved with Python Programming Language and MySQL as backend. The existing system adopted calibrated and uncalibrated measurement method and obtained an accuracy value of 59%, while the proposed system adopted confusion matrix as an evaluation technique and also obtained a ROC curve with accuracy value of 89%. The study will be beneficial to stakeholders in the Agricultural Sector and other researchers with keen interest in the study area.
